

Glycopyrrolate (Robinul 1mg) for treatment of excess perspiration

Directions:

This medication must be titrated up slowly by adding 1 pill every week. See dosing chart below.

Once you reach a dose that controls your perspiration, do not increase your dose any further.

If you develop side effects from the medication, decrease your dose by 1 pill and continue at that dose.

	Morning	Afternoon	Evening
Week 1	X	X	1 pill
Week 2	1 pill	X	1 pill
Week 3	1 pill	1 pill	1 pill
Week 4	1 pill	1 pill	2 pills
Week 5	2 pills	1 pill	2 pills
Week 6	2 pills	2 pills	2 pills

Precautions:

Potential side effects of glycopyrrolate include dry mouth, constipation, nausea, flushing, headache, urinary retention, dry eyes, blurred vision, rapid heart rate, and change in taste.

If side effects develop prior to control of sweating, please discontinue the medication and notify your physician.
